

dada machines doppler v1.0

Cortex M4F & FPGA development board

— Arduino Pins – SAMD51G19A
— FPGA Pins – ICE40UP5K

dada machines doppler v1.0

quickstart guide

1. set up the SAMD51 in Arduino

- 1 > Download the Arduino IDE > <http://bit.ly/arduinoide>
- 2 > Install the dadamachines – board support package
 - > learn how: > <http://bit.ly/dadaino-boards>
- 3 > Connect the doppler to your computer via USB.
 - > Start programming

2. dig deeper

You want to see example projects and learn how programming of the FPGA works?

Follow our detailed guide here online:

<https://github.com/dadamachines/doppler>

3. contribute & share your projects

Get involved on Github / Twitter or in our Forum.
